

## Description

### Strapster

#### BACKGROUND OF INVENTION

[0001] The Strapster is an invention to carry items on clothing hangers or hooks, for example dry cleaning, travel bags or laundry

#### SUMMARY OF INVENTION

[0002] The Strapster is an invention to carry items on clothing hangers or hooks, for example dry cleaning, travel bags or laundry

#### BRIEF DESCRIPTION OF DRAWINGS

[0003] The first drawing shows the top view of the Strapster with the holes at either end and the rings at either end of the strap. The second drawing shows the Strapster on its side with the rings running through the loops.

#### DETAILED DESCRIPTION

[0004] The Strapster is primarily a fabric of varying length that hangs over the shoulder. This fabric that hangs over the

shoulder can be made of most any fabric (i.e. suede, leather, canvas or nylon) and can include velcro to adjust the length of the strap. There are two holes at either ends of the fabric. The holes are either reinforced or not reinforced with metal loops depending on the fabric. Through each hole there will be one or more rings of varying size (i.e. like metal shower curtain rings or keychain rings). These rings can be used to hold clothing hangers or hooks.
